About Workato

Workato delivers enterprise infrastructure for the agentic era, redefining iPaaS and helping enterprises unify data, applications, processes, and AI into a single, governed platform. A leader in Enterprise MCP and trusted by 50% of the Fortune 500, Workato's cloud-native architecture connects every application, data source, and process to power real-time orchestration at scale. With enterprise-grade security and continuous innovation at its core, Workato provides the trusted foundation for organizations to automate with confidence and operationalize AI across the business. Get Started

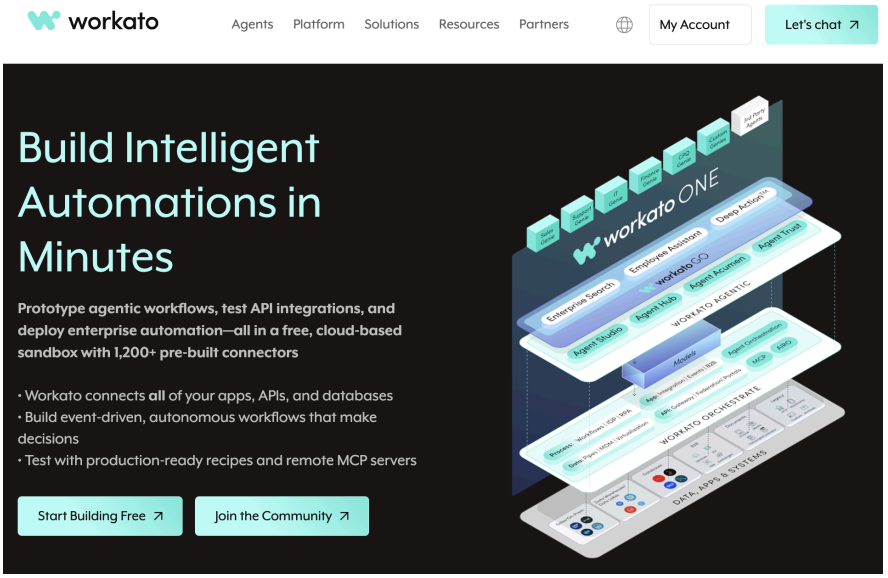
To trial Workato's AI features and start on AI projects, create a **Developer Sandbox Account**.

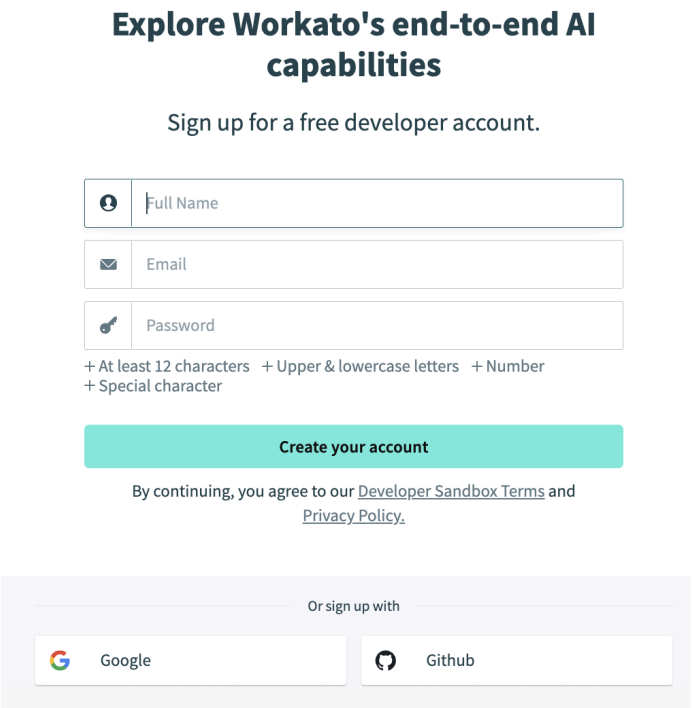
- Workspace has no expiry date, and is limited to 50,000 free usage credits - more than enough to build several use cases over an entire year.
- All AI-native and Enterprise features present, including
  - AIRO Copilots (Docs)
  - Intelligent Document Processing (IDP) (Docs)
  - AI by Workato connector (Docs)
  - AI Hub (formerly known as Agent Studio) for building Genies (Docs)
  - Workato GO front-end interface (Docs)
  - Workflow apps (Docs)
  - API Management (Docs)
  - Data tables (Docs)

Set Up Your Developer Sandbox Account

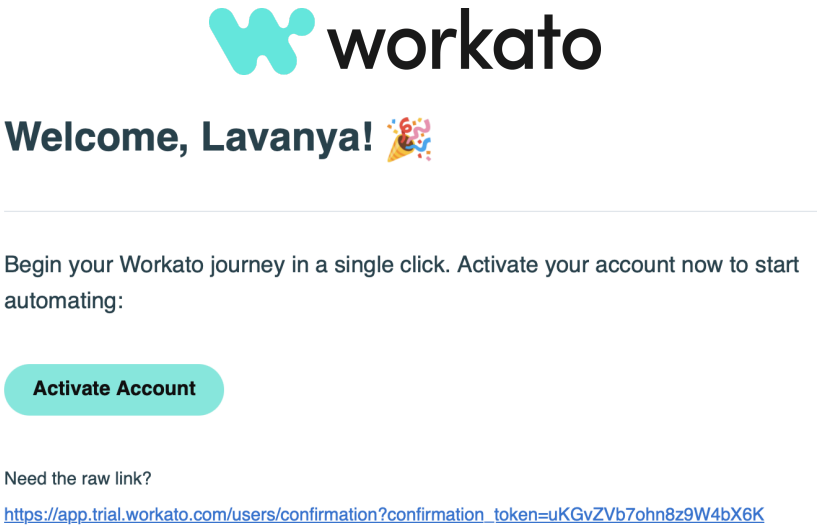
1. Open this **sandbox link**: https://www.workato.com/sandbox , then click on "**Start Building Free**



2. Fill in the rest of the info and click **Create your account**. You have the option to sign in using your Google or GitHub account too. Students and educators are advised to sign in using your school emails.

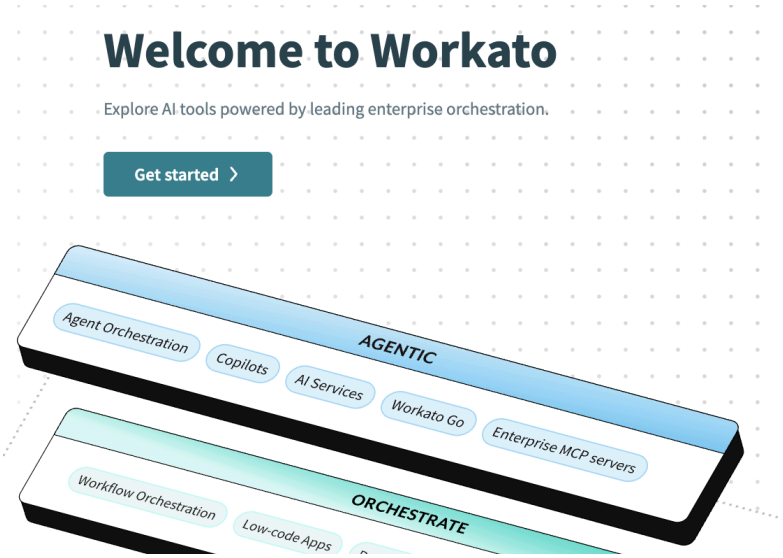


3. Look for an email titled, **Activate your account**, sent by admin@trial.workato.com. Check your spam folder if you do not see it in your inbox.



- Click on the **activate account** button in that email or copy and paste the link provided into your browser. You will be redirected to the sign in page, where you will need to key in your password

4. Next, click **Get started**



5. To build your own AI Agent on Workato's Agent Studio, click on **Create a genie**. Alternatively, start by building a recipe or setting up an MCP server.

5. To build your own AI Agent on Workato's Agent Studio, click on **Create a genie**. Alternatively, start by building a recipe or setting up an MCP server.

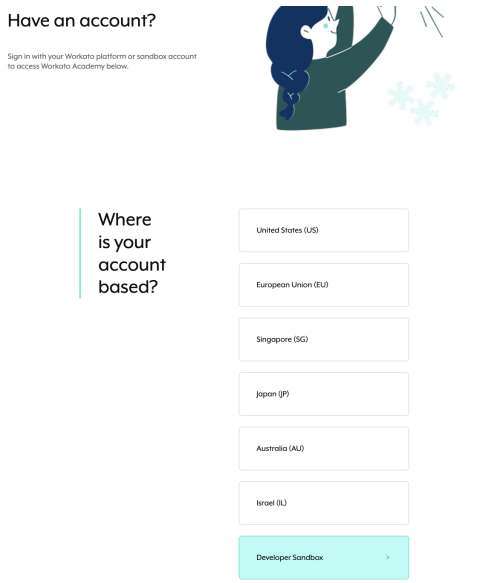
🎉 You now have a Developer Sandbox account! To sign in to it again, use this link: https://app.trial.workato.com/users/sign_in_trial

How to login to Workato Academy using Developer Sandbox

To pursue your Workato Academy certifications using your Developer Sandbox account, follow the below steps:

1. Click "Login" on the top right corner of the Workato Academy page: https://academy.workato.com/learn
2. When asked "Where is your account based?", scroll down and select "Developer Sandbox"

workato



3. Once you key in your sandbox credentials, you will be prompted to adjust the time zone accordingly

Get Certified

- Learners can sign up for an Academy account here. If you already have a developer sandbox account, you can login with those credentials. Select "**United States**" as the location during login because all education trial accounts are hosted in the US data centre by default.
- As a start, secure these certifications by registering using a corporate/student email.
    - Foundations 1 (~3 hours): Covers the core platform architecture and solution design frameworks, in addition to basic recipe design
    - Agentic AI Basics (30 min)
    - Enterprise MCP (Model Context Protocol) (~1 hour)
    - Introduction to Agent Studio (~1 hour)
- You can then progress to Workato's Foundation 2 course (~6 hours), which is highly recommended for intermediate learners who wish to explore capabilities across the pillars of Workato's BOAT (Business Orchestration and Automation Technologies) framework — iPaaS, Data Orchestration, API Management, Business Process Automation (BPA), and AI Agentic workflows.
- Completing the above certifications is a prerequisite to those seeking to earn the highly sought-after Integration Developer Course and Certification, which leads to a 4-day Integration Developer Bootcamp that is exclusively open to advanced builders.
- Don't forget to add your certificates to LinkedIn by navigating to "My Profile" at the top right hand corner of the academy.workato.com page and clicking "Add to LinkedIn"

All courses include guided lab exercises that introduce key concepts through hands-on practice.

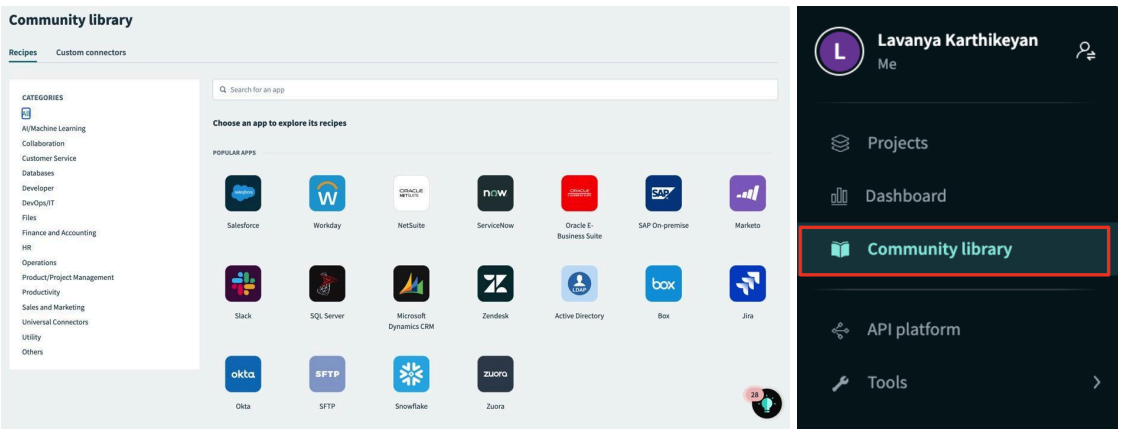
Get Inspiration from the Community Library



Once you have logged in to your Workato account, click on **your initial on the left**. Then click on **Community Library** to access it.

How to Migrate Recipes from Training Workspace to Developer Sandbox or existing Workato Account?

Step-by-Step Migration Process

1. Export the Recipe Package (refer to Workato's Docs here)

    1. Navigate to Recipe Lifecycle Management (RLM): In the source workspace, go to **Tools > Recipe lifecycle management**.
    2. Select Export: Choose the **Export** tab.
    3. Define the Manifest: Select the project folder or specific subfolders containing the recipes you want to migrate. Workato automatically adds dependent assets (connections, lookups) to the manifest.

4. Include Tags & Dependencies: Ensure "**Include tags**" is checked, and review the dependencies list. If connections are in the root folder, move them into the project folder for easier bundling.
5. Build and Download: Click **Build** and export package. This generates a .zip file that you can download to your local machine.

2. Import the Recipe Package (refer to Workato's Docs here)

1. Navigate to RLM: Sign in to the destination workspace, go to Tools > Recipe lifecycle management.
2. Select Import: Choose the Import tab.
3. Upload ZIP File: Drag and drop the downloaded .zip file.
4. Select Target Folder: Select the pre-existing target folder in the destination workspace for the imported assets.
5. Review and Import: Review the package contents. Workato will highlight any missing dependencies or potential conflicts.
6. Complete Import: Click Next to complete the import.

3. Post-Import Adjustments

- Re-establish Connections: While RLM imports connections, you often need to manually re-authenticate them in the new workspace (e.g., swapping DEV NetSuite credentials for PROD credentials).
- Update Environment Properties: Update any environment-specific variables, such as API endpoints or user IDs.
- Start Recipes: The imported recipes will be stopped; they must be started manually in the target workspace.

Alternative: Using Environments (Unified Workspaces)

- If your organization uses **Workato Environments**, you can deploy directly from the Deployments tab within a project, which serves as an optimised, built-in version of RLM, allowing direct promotion to Test or Production without local file downloads.

Appendix

If you are still using a **Workato Academy Account** instead of a Developer Sandbox Account, note that it does not include AI Hub and other enterprise AI features that are part of the Workato One plan. You get a 30-day trial by default.

- Education partners can request for extensions by providing the **Workspace ID** of users (or name + school email)
- All other users can reach out to your Workato account team to request extensions, which may be offered in a case by case basis

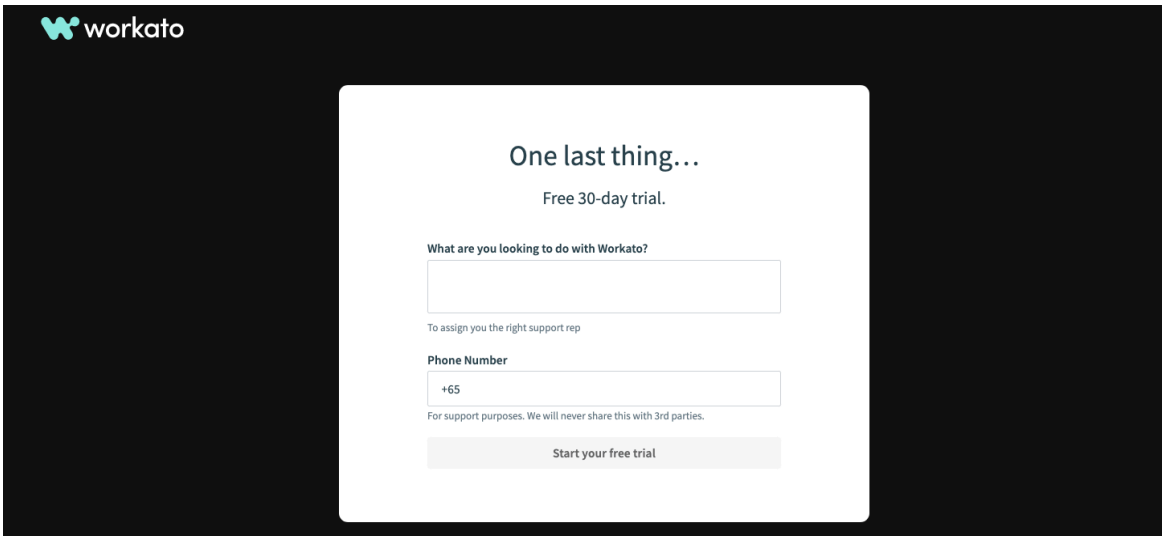
Workato Academy Trial Account (30 days)

1. Open this **signup link**: https://app.workato.com/users/sign_up

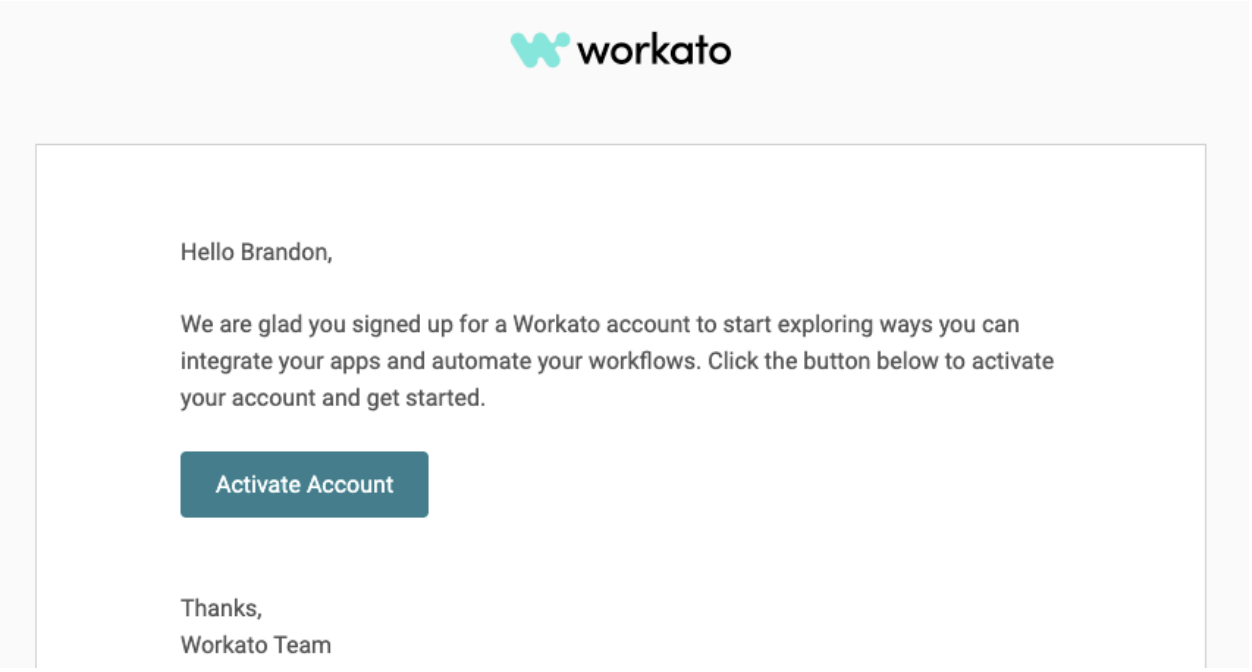
   a. Use a business or school email address only. Personal emails will not work.

   b. Fill in the rest of the info and click "Start your free trial". If asked to choose a

country, select "**United States**" because training account features are typically made available through Workato's US data centre.



c. Go to your email inbox, you should've received an email from admin@workato.com. Click "**Activate Account**"



🎉 You now have a Workato trial account!

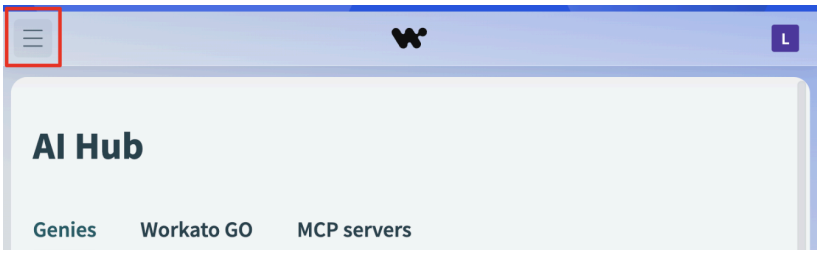
To login to this account, use this link: https://app.workato.com/users/sign_in

You can also login to academy.workato.com using the same credentials, but if asked to choose a country, select "**United States**" because training account features are made available through Workato's US data centre.

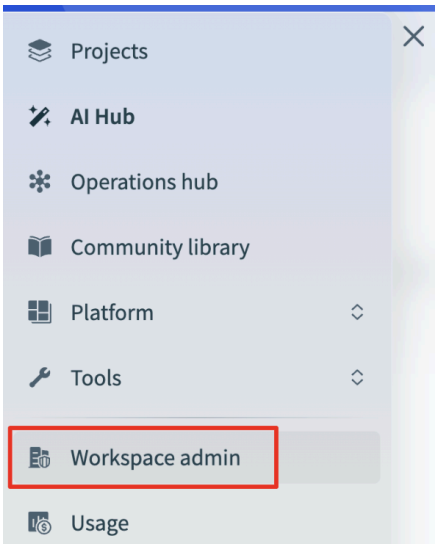
How to locate your Workspace ID

You will need to share your **Workspace ID** with Workato if you need any feature changes to be made to your sandbox workspace.

1. To locate this ID, click on the list icon at the top left of the screen.

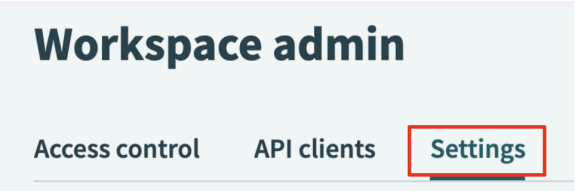


2. Then select **Workspace Admin**



3. Click on the **Settings** tab

workato



4. Scroll down to find your **Workspace ID**
